Several Types of glue can be used on thermally modified wood, Including:
Polyvinyl acetate (PVAc): A thermoplastic adhesive that's eco-friendly and has good adhesion to sidered one of the strongest and most reliable options for wood glue joints.

Polyurethane (PU): A thermosetting adhesive that can be used in 1- or 2- component forms.

Emulsion polymerisocyanate (EPI): A chemically crosslinking adhesive that sets quickly and is heat resistant. EPI adhesives are suitable for gluing hardwood, tropical wood species, and wood with high resin content.

Resorcinol-phenolic (RP) glue: A suitable glue for heat-treated wood. Water solutions of MUF
Water solutions of MUF and MF resins: Can be used to effectively bond thermally modified wood.

Thermally modified wood has low moisture absorption, so water-based glues may require a longer processing time to be absorbed.

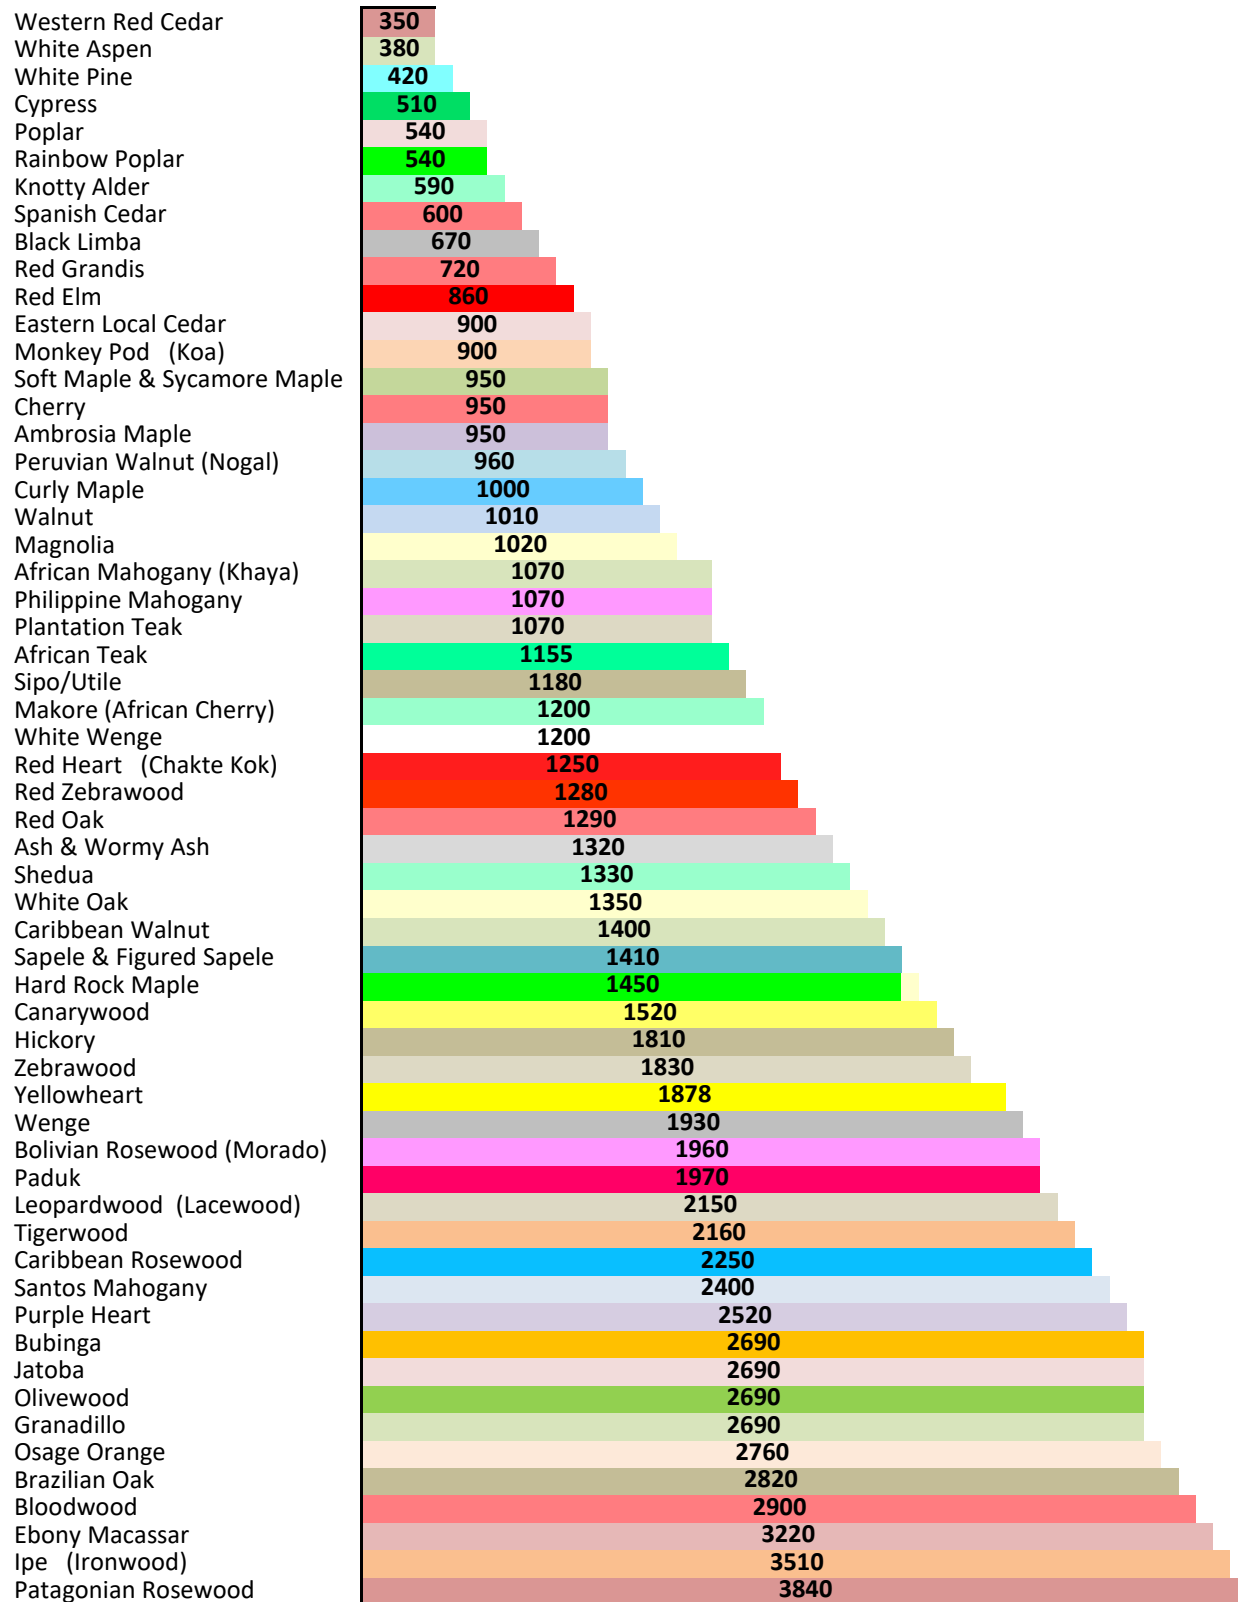

You can not use the normal glue when working with Thermally Modified materials.
