**You can not use the normal glue when working with Thermally Modified materials.**

**Several Types of glue can be used on Thermally Modified wood, Including:**

**Polyvinyl Acetate (PVAc):** A thermoplastic adhesive that's eco-friendly and has good adhesion to wood. PVAc glues are considered one of the strongest and most reliable options for wood glue joints.

**Polvurethane (PU):** A thermosetting adhesive that can be used in 1- or 2- component forms.

**Emulsion Polymerisocyanate (EPI):** A chemically crosslinking adhesive that sets quickly and is heat resistant. EPI adhesives are suitable for gluing hardwood, tropical wood species, and wood with high resin content.

**Resorcinol-Phenolic (RP) glue:** A suitable glue for heat-treated wood.

Water solutions of MUF and MF resins: Can be used to effectively bond thermally modified wood.

**Thermally Modified wood has low moisture absorption, so water-based glues may require a longer processing time to be absorbed.**
